Key Findings & Recommendations for HR Leadership

Hiring Funnel Drop-Off & Time-to-Hire — Key Recommendations

Finding 1 — Stages passed is the #1 predictor of time-to-hire (coefficient: 6.66) Each additional funnel stage adds ~7 days. Recommendation: audit roles requiring 5+ stages and consolidate Technical and Final interviews into a single panel interview where possible.

Finding 2 — Applied-to-Screened is the largest drop-off point (55% lost) Over half of applicants are lost at the very first screening. Recommendation: review job description clarity and ATS screening criteria — overly restrictive filters may be eliminating qualified candidates too early.

Finding 3 — HR department has the highest offer rate (6.3%) but Engineering lags Engineering roles show both a lower offer rate and longer time-to-hire. Recommendation: assign senior recruiters with technical backgrounds to Engineering pipelines and introduce structured technical screening rubrics.

Finding 4 — Offer acceptance correlates with faster hiring (coefficient: -2.87) Candidates hired faster are more likely to accept. Recommendation: set a target time-to-hire SLA of 21 days for Junior/Mid roles and 35 days for Senior/Lead roles, with recruiter dashboards tracking compliance weekly.
